

Group of Companies

RADARS AND SAM

ABOUT US

The company together with its partners successfully operates in numerous markets, both in the country and abroad.

Radar P-30

System KUB

Raket system "DVINA"

High range in organizational, technical-technological and scientific-research work and professional staff enable the most complex degree of overhaul, maintenance, repair and modification of modern technology.

Modernly organized overhaul processes enable optimal duration of overhaul, which is performed on the basis of exhaustive and precise overhaul-technical documentation.

In general, we repaired and successfully executed target shooting battles in the air, water and on the ground. Also, we have successfully trained a large number of crews for combat operations and crews for their maintenance.

The Company has won the technologies of defecting, dismantling, repair, assembly, autonomous and complex testing and adjustment of the following devices and systems :

- Electronic circuits of radar-computer means and missile systems (receivers, transmitters, indicators, etc.);
- Antenna-feeder systems (antennas, waveguides, coaxial lines, etc.);
- Electromechanical parts of radar-computer devices and missile systems;
- Servo systems for antenna control and automatic target tracking;

The company has achieved a high standard in the field of overhaul, which is why it enjoys a reputation and trust in the field of military industry.

OVERHAUL

Based on these technologies, the Company has great potential in the field of device overhaul, regardless of technological generation and country of origin.

Russian-made "P" series radars: P-12;P-14;P-15;P-18; P-30;P-35, PRV-9B, PRV-11, SNAR-10

P-15

P-18

PRV-9

Rocket guidance stations: DVINA, VOLHOV, PEČORA, NEVA, KUB

KUB

NEVA

KUB

Radars in TTL technology of western production

S - 600

TPS - 70

OVERHAUL

Naval radars, Russian production MR-103, MR-302
Naval Target Radars: MR-104

The company has a large number of spare parts, and we also produce parts and assemblies that are worn out or physically damaged.

Naval radars in TTL technology of western production: TRITON observation radar and CASTOR target radar.

OVERHAUL— KTP AND REPAIR

Naval rakets series "P": P -15, P-20 i P-21-

Surface-to-air missiles: 11-DMKT, 20-DSU, 20-DP, 5JA-23, 3M-9E.

PRODUCTION

Production of PNS lamps in modern LED technology that meets all the characteristics for heliports, military and sports airports

The Company's warehouses contain a large number of original parts, as well as parts of domestic production and technical documentation for their production

RADAR MODERNIZATION P-12/18

The upgraded Radar P-12 automatically monitors targets and transfers data to the operations center.
